Classifai version 2.0 Alpha 1
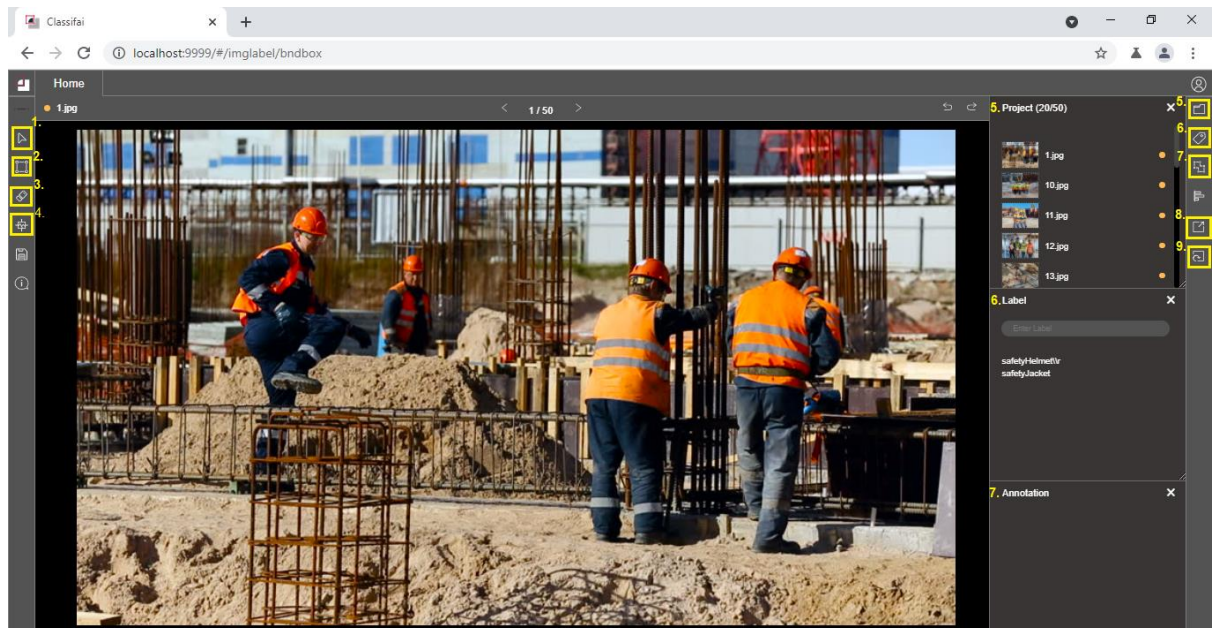

a. You can download the latest Classifai v2.0 here: https://classifai.ai/products/
b. The latest Classifai v2.0, only supports the bounding box mode only for now.
c. Open the Classifai and start your new project.
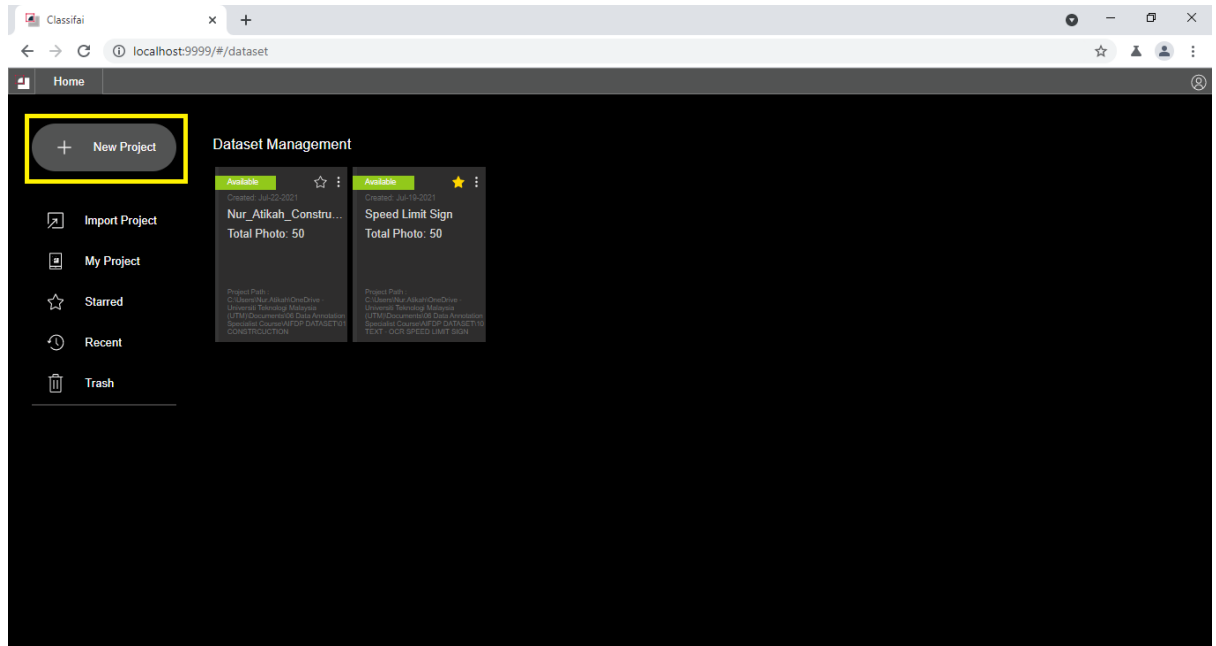

d. Provide your project with the project name and choose the dataset folder, labels file(if necessary).
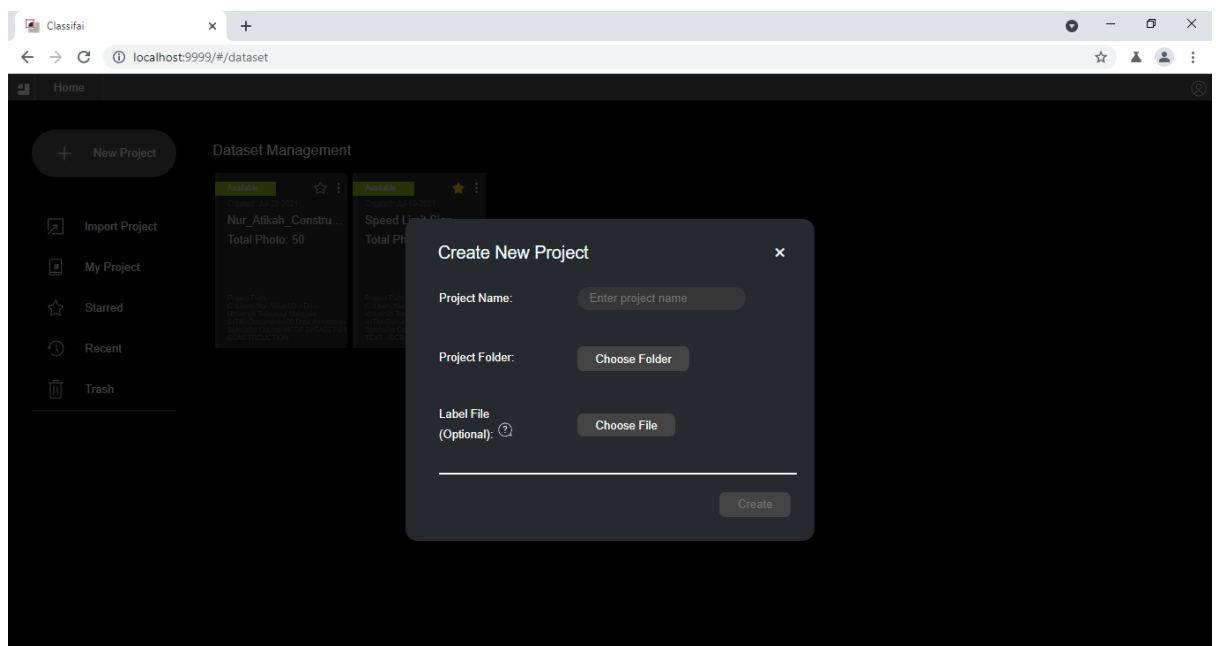

e. Here is the system interface for the new version of Classifai.

1. Pointer
   ● To select and move the image.
2. Annotation Tool
   ● To perform the annotation. This functionality is different according to the mode selected, either bounding box or segmentation.
3. Eraser
   ● To erase all the annotations on the current image.
4. Fit center
   ● To show the whole image by fitting it into the workspace.
5. Project folder
   ● Listing out all the images of the project/dataset folder.
6. Label
   ● List of labels created for the project.
7. Annotation
   ● List of annotations made on the image.
8. Export
   ● Can export project in two options
     a. **Config File**: Save a JSON format file into a project folder.
     b. **Zip File (with data)**: Save all the images and the project JSON file into one zip file.
9. Reload
   ● To initiate the project refresh.

f. For further information, you can achieve it from here:
